

**Fig. 17.** CO line fluxes observed with the JCMT, APEX and *Herschel*. Overplotted are the fluxes from the three model components (green, red and blue) and their sums (black). Error bars ( $1\sigma$ ) reflect the 10–30% calibration uncertainty of *Herschel* and the 20–30% calibration uncertainty of the JCMT and APEX. Upper limits are at the  $3\sigma$  level.
